WORK EXPERIENCE

George Mason University **Fairfax, Virginia**
Telecom Technician 2021-current

- Coordinate with Mason Telecom Coordinators to set up VoIP phones for new GMU faculty.
- Identify issues and troubleshoot VoIP, Analog, and Fax Machines as quickly as possible.
- Create new phone records for new users as well as updating existing records with correct information.
- Coordinate with the Network Center to activate switches with the correct VLAN for VoIP phones as well as patching ports in the network closet.

George Mason University **Fairfax, Virginia**
Classroom Support Technician 2019-2021

- Provided support to Mason Professors on classroom technologies by troubleshooting over the phone and in person.
- Created support tickets to document workflow process.
- Performed daily maintenance on classroom technology before classes started to identify any issues.
- Built and deployed new computers to replace old computers in classrooms.
- Trained new and existing Professors on how to use the technology in the classrooms.

Projects

Movie Search

- Created a basic movie search with React using OMDb API to fetch data and display it for the user.
- Generated data for the movie that displays movie poster, rating, genre, and IMDb link.

Zukowski Inventory System

- Designed an inventory system using React, MySQL, NodeJS, and Express to store items for an Auto Repair company.
- Implemented a login page using bcrypt to encrypt the password to grant authorization to the inventory page.
- Hosted with Vercel using Heroku for backend to store the database.

Soccer Locker

- Created using ASP .NET with Entity Framework for a class project. Used MVC to generate create, delete, edit, and update pages for authorized users.
- Used authorization to give users specific roles and redirecting users if they are not logged in.
